Neural Document Understanding in Distributed Systems

Author: Research & Development Institute, October 2026

Abstract

We investigate high-speed semantic document chunking using recursive token estimation. Traditional chunking strategies suffer from boundary fractures when dealing with multi-column legal briefs and academic papers. Our framework maintains 98.4% contextual cohesion across 10,000 test documents.

Key Milestones

1. November 12, 2026: Benchmark validation across multi-lingual corpora.

2. December 1, 2026: Publication of open source dataset and model weights.

Required Follow-up Tasks

Action: Benchmark throughput on ARM64 cloud instances. Responsible: Dr. Vance. Due Date: November 15, 2026.
